

HOW TO USE YOUR TOILET IF SEWER SYSTEM IS DOWN

- 1 Turn off water supply from valve next to toilet.
- 2 Empty water from bowl & tank by scooping out to save gray water or try flush & plunge out.
- 3 Sanitize toilet; use Clorox or Lysol-type product
- 4 Plug drain hole to prevent sewer gas escape. Need a malleable shape that can trap gas. Three suggestions were: a. Old rags smothered in Crisco and stuffed into a stocking; b. Rice covered in vaseline stuffed into a form; c. Kitty litter or dirt filled balloon.
- 5 Lift seat, slide open kitchen garbage bag over bowl and fit in place; secure with strip of tape.
- 6 **For urination:** place urine hat across front of toilet, put seat down and urinate. Empty into sealable container such as 5 gallon bucket.
- 7 **For defecation:** remove urine hat and defecate in garbage bag-lined bowl. Sprinkle with poo powder, sawdust or kitty litter. You can keep material in lined toilet for several uses and then remove entire bag and place in sealable container. Alternative: remove each time with pet poo bags. Put pet poo bags in container.
- 8 **WAIT for disposal instructions from authorities.**

Supplies:

Disposable vinyl gloves; kitchen garbage bags; poo powder; wide tape; urine hats; doggie poo bags; large, lidded containers (round 5 gallon container, large kitty litter container, etc); large bag to cover entire toilet; method to plug toilet gases. Toilet paper and hand sanitizer.

Goal is to keep poo & pee se parate!!!
